

LED UVGI Air and Surface Disinfection Solution

Protecting Yogis at Yoga Wave

ABOUT THE CUSTOMER

COVID-19 has pushed consumers' to think about health and wellness more holistically. 68 percent of survey respondents reported that they prioritized their health more after the onset of the pandemic, according to a study by Mckinsey.

However, even with as more people are vaccinated, it is important to keep the premises safe from COVID-19, its variants, and other harmful

bacteria, as much as possible. Consumers want to have peace of mind for the in-person fitness experience.

Thus, a new yoga studio in Singapore, Yoga Wave, is determined to create a safer environment for yogis with Ecospark's LED UVGI (UV-C) Surface and Air Disinfection Solution.

CHALLENGES & SOLUTION

Just like any other indoor fitness center, Yoga Wave is an indoor yoga studio equipped with various fitness equipment. Yoga mats, yoga blocks, and weights are items commonly found in fitness studios that are considered high-touch surfaces as these items are shared among the members of the fitness studios. In addition, as members are allowed to exercise without masks in indoor fitness centers, maintaining indoor air quality has become extremely important for the safety of the members.

Realizing the potential risks involved in such settings, Master Anant, the founder and owner of Yoga Wave, deployed Ecospark's LED UVGI (UV-C) air and surface disinfection solution as a main protective measure in his studio. This ensures that the indoor air in Yoga Wave is constantly being disinfected and minimizes the risks of contamination or infection through surfaces.

Adopting Ecospark's UV-C disinfection solutions is a natural and intuitive choice! This keeps our space safe with disinfected surfaces and pathogen-free air which acts as double protection to complement our existing studio disinfection and sterilization measures.

Master Anant, Founder of Yoga Wave

LED UVGI (UV-C)

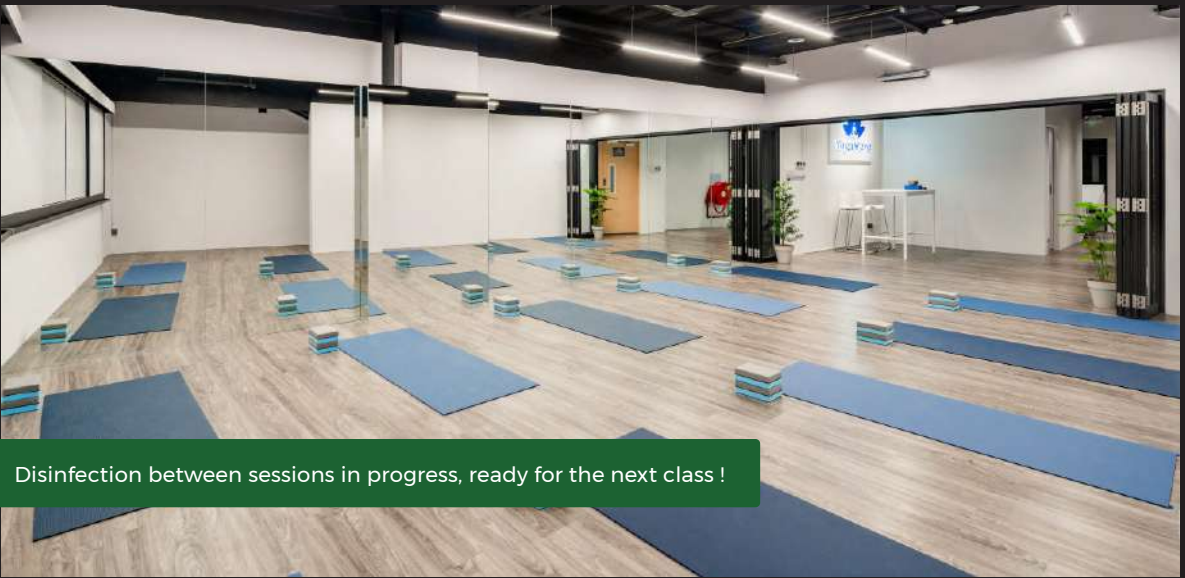

Air & Surface Disinfection Solution

Ecospark's technical experts installed the LED UVGI (UV-C) surface and air disinfection solutions at various areas of Yoga Wave, including the reception area, main studio, and toilet.

As an additional precaution, Yoga wave utilizes the Air and Surface Disinfection Solution to disinfect the entire fitness studio and air, including shared fitness equipment, in between each session. This eliminates any bacteria and viruses, ready for the next batch of members to attend the session. Adopting this practice lowers the risk of cross-contamination of COVID-19 significantly. With these laboratory-accredited disinfection solutions in place, members of Yoga Wave can practice in a clean environment with peace of mind.

Upon completion of the installation, tests and commissions were carried out. On 2nd July 2021, the project was handed back to the owner of Yoga Wave.

Disinfection between sessions in progress, ready for the next class !

CONCLUSION

Fitness consumer habits are evolving rapidly. Even as more people are vaccinated, safety is still a priority in the minds of consumers. The fitness industry must shift from simply surviving the COVID-19 crisis to looking for ways to thrive in the next normal, building relationships and meeting the consumers' safety needs, and ensuring that steps are taken to minimize the transmission of harmful viruses and bacteria.
